

1st of August 2023

Dear partner supplier,

I trust this correspondence finds you in good health and high spirits.

I am writing to inform you of an exciting development at Automotive Glass Experts (AGE) and to underscore the utmost importance of our steadfast commitment to achieving climate neutrality by 2025. Additionally, I would like to emphasize our strong desire to foster partnerships with suppliers who share our unwavering dedication to environmental consciousness.

At AGE, we recognize the urgent imperative to address climate change and the pivotal role our organization plays as a prominent entity within the automotive industry.

As a provider of automotive glass solutions, we wholeheartedly acknowledge the environmental impact inherently associated with our operations and supply chain.

Consequently, we have charted an exhaustive strategy to realize climate neutrality by employing a comprehensive three-fold approach: rigorous measurement of emissions, targeted reduction aligned with the Science-Based Targets initiative (SBTi) and Paris Agreement goals, and the responsible compensation for residual emissions through Plan Vivo projects certificates.

Foremost, we firmly believe that accurate measurement serves as the bedrock for comprehending the scope and magnitude of our greenhouse gas emissions. To this end, we will undertake a meticulous assessment to identify and quantify emissions across our complete value chain, spanning to manufacturing processes, and logistics. By conducting meticulous measurements, we can precisely identify areas where emissions are most pronounced and implement precisely targeted reduction strategies.

Secondly, we are unequivocally committed to reducing our emissions in perfect sync with the SBTi and Paris Agreement goals. These universally acclaimed frameworks provide unambiguous roadmaps for businesses to establish and achieve audacious emission reduction targets. AGE has wholeheartedly embraced this approach and has established a rigorous set of reduction targets spanning our entire organization.

By investing in cutting-edge energy-efficient technologies, optimizing our processes, and implementing sustainable transportation solutions, we aim to attain substantial emission reductions within our organization.

Nonetheless, we humbly recognize that certain emissions may prove arduous to eliminate entirely.

Our pledge to climate neutrality extends far beyond our internal operations; it encompasses our esteemed suppliers as well. We staunchly believe that forging partnerships with likeminded suppliers who place paramount importance on environmental stewardship is pivotal to achieving our overarching sustainability objectives.

We are resolutely committed to partnering exclusively with suppliers who share our unwavering vision and demonstrate an unequivocal dedication to reducing their own environmental footprint. We shall actively seek out suppliers who have exemplified a profound commitment to sustainability, offering preferential partnerships to those who wholeheartedly align with our climate-neutral aspirations.

By synergistically uniting with environmentally conscious suppliers, we can foster a more sustainable automotive glass industry. Together, we create change, implement sustainable practices, and profoundly diminish our collective impact on the environment.

We would be delighted to explore avenues of collaboration with your esteemed organization, given your demonstrated commitment to environmental stewardship.

We harbor unwavering confidence that, by forging a cooperative alliance, we can achieve remarkable strides toward a greener and more sustainable future.

Thank you for dedicating your valuable time to consider our unwavering commitment and collaborative approach. We eagerly anticipate the opportunity to engage in further discourse and explore the potential for a mutually beneficial partnership.

Please do not hesitate to reach out to our esteemed Sustainability Manager Stefan Clijnk by email (clijnk@automotiveglassexperts.com) to initiate a dialogue.
